Struck By Hazard

GENERAL INFORMATION

A struck by hazard refers to an accident in which a worker was hit and injured by an object or equipment. In order to prevent Struck by incident, the following basic safety reminders must be considered to have a safe working location for everyone.

Struck by Swinging Object

Occurs when materials are mechanically lifted and causes the load to sway or when a worker is inside the swing radius of a piece of heavy equipment such as a crane

- Keep a safe distance, stay outside the swing radius of any moving equipment.
- Barricade work area
- Designated flagman/banksman

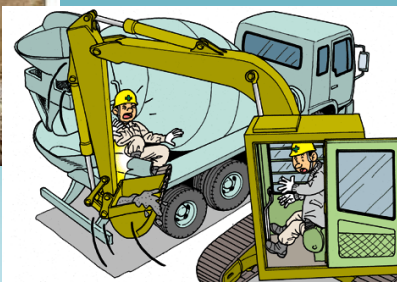

Struck by Moving Object

Occur when struck or run over by a moving vehicle or instances in which the worker is struck by a moving equipment on the same level.

Control measures;

- PWAS system (detection sensor&camera)
- Backup/reverse camera
- Designated flagman/banksman
- Removal of any obstructed objects inside the cabin for 360 deg. clear view by Ope.
- Operator 360 deg. check around equipment prior to operate.
